

MIL-STD-889 anodic index

Galvanic compatibility explorer

Dissimilar-metal couple screening (OK / marginal / protect) against the environment-dependent allowable potential difference, identifying the anodic (sacrificial) member with area-ratio guidance — a per-environment compatibility heatmap over the common construction metals.

0.15–0.50 Vallowable ΔV by environment

WHAT YOU GET

- Couple verdict and anodic member from the published anodic-index table
- Per-environment compatibility matrix (harsh-marine / industrial / controlled-indoor)
- Area-ratio and coat-the-cathode guidance on flagged couples

Ask Deckhand: “Screen this dissimilar-metal couple for galvanic compatibility in a marine environment (MIL-STD-889 anodic index) and tell me if it needs protection.” — send to @the_deckhand_bot to run it live.
