

API-RP-16Q · API-STD-2RD

Drilling-riser operability envelope explorer

Governing utilisation across vessel offset and surface current for a generic drilling-riser stack-up per operating mode; operable when utilisation is at or below 1.0, with near-boundary points escalating to the exact analytical screen.

WHAT YOU GET

- Offset x current operability envelope per operating mode
- Governing utilisation vs cited code limits (API RP 16Q / API STD 2RD)
- Near-boundary points escalate to the exact analytical run

Ask Deckhand: “Screen my drilling-riser operability: governing utilisation across vessel offset and surface current per operating mode, against the API RP 16Q / API STD 2RD limits, and flag near-boundary points that need the exact analytical run.” — send to @the_deckhand_bot to run it live.
