

DIGITALMODEL · PIPELINE COMPANY GTM PACK

Pipeline wall thickness + rigid jumper VIV capability brochures

A concise prospect pack for showing how repeatable digital calculations can turn early screening, option comparison, and client reporting into traceable same-day engineering collateral.

72 wall-thickness cases**680 freespan/VIV cases****200 rigid-jumper VIV cases****300 installation-suitability cases****BROCHURE 01**

Pipeline Wall Thickness Screening

Multi-code wall-thickness screening across DNV-ST-F101, API RP 1111, and PD 8010-2 for six pipe sizes and X65 material basis.

- [PDF brochure](#)

BROCHURE 02

Rigid Jumper Freespan & VIV Screening

DNV-RP-F105-based screening for jumper spans, current velocity, gap ratio, in-line VIV, cross-flow VIV, and lock-in risk.

- [HTML brochure](#)
- [PDF brochure](#)

EXTENSION**Rigid Jumper Installation Suitability**

Existing vessel-capability extension for installation envelope screening across jumper lengths, depths, sea states, and representative CSV classes.

- [Existing PDF extension](#)

OUTREACH**Pipeline-company email draft**

Concise email draft with subject options and a 30-minute review ask.

- [Markdown email draft](#)

Use note

This pack is GTM/sample collateral, not final design sign-off. It should be used to start a low-risk pilot discussion where client-specific inputs, code basis, assumptions, and review workflow are agreed before engineering reliance.

Generated 2026-05-07T19:07:36.733321+00:00 from existing digitalmodel GTM demo assets.
