

DNV-RP-C201 · class rules

Ship structural strength

Plate and stiffened-panel buckling for ship structure — plate-field, column and tripping interaction explored against the governing class code.

215.61 MPapanel tripping f_T **DNV-RP-C201**

governing code

WHAT YOU GET

- Plate capacity vs geometry and combined in-plane loading (Johnson-Ostenfeld correction)
- Plate-field / column / torsional-tripping interaction for stiffened panels
- Tripping stress reproduces the DNV-RP-C201 worked example ($f_T = 215.61$ MPa)
