
governing-code provenance · CI-guarded

Validated against published references

Every strength / FFS result reproduces a standard's worked example, a published rating, or the governing closed form, and carries a code_reference naming its governing code — kept in sync with the codes register by a CI test.

WHAT YOU GET

- Published-validated vs derivation-anchored clearly labelled on every figure
 - Tubular, structural-detail and manoeuvring golden values frozen as references
 - A published number can never silently cite a code the register doesn't list
-
