

API 5C3 · API 5CT · NACE MR0175

Casing design explorer

Eight candidate products checked against a reference frac'd well — per-mode design factors with governing depth and pass/fail, max allowable frac surface pressure, the golden Barlow worked example (5-1/2" 23# P110 → 14,520 psi), the NACE sour-service screen and the connection-class table.

candidate products

14,520 psi

golden Barlow burst

WHAT YOU GET

- Per-mode design factor, governing depth and pass/fail for every product
- Depth profiles for the tubing-leak and frac screen-out load cases vs the burst rating
- Max allowable frac surface pressure at DF 1.25 per product
- Every published margin re-verified against the live checks in CI

Ask Deckhand: “Check my production casing design (burst / collapse / tension / triaxial) per API 5C3 and give me the max frac surface pressure.” — send to @the_deckhand_bot to run it live.
