

API 579-1 · ASME B31G · DNV-RP-F101

Fitness-for-service

Remaining-strength assessment of corroded and metal-loss components with an inspector decision layer — benchmarked to standard worked examples and published ratings across the three governing FFS codes. Built to slot behind inspection, mechanical-integrity and RBI service programs: thickness and defect data in, code-cited verdict and report out.

interval planning

WHAT YOU GET

- Remaining-strength and inspector-verdict walkthrough across API 579-1, ASME B31G and DNV-RP-F101
- Accept / re-rate / take-more-measurements / escalate driven by measurement sufficiency
- UT / phased-array thickness-grid intake; remaining life and next-inspection interval per API 510 / 570 / 653
- RSTRENG effective-area and B31G screens validated to published worked examples
- API 579-1 Part 6 pitting (auto-routed from UT grids), Part 12 dent / dent-gouge, and BS 7910 Option-1 FAD weld-flaw envelopes
