

IMO MSC.137(76) · Clarke 1983 · OCIMF

Manoeuvring & station-keeping

Low-speed manoeuvring and station-keeping screens — turning circle against the IMO criteria, minimum steerage speed by loading condition, the rudder angle needed to hold heading against a current, built on a researched rudder-type database, and a mooring-system resilience traffic-light composed from the pre-computed mooring atlases.

WHAT YOU GET

- Turning circle vs the 5·L IMO advance/tactical-diameter limit
- Steerage-threshold speed vs wind (laden / ballast / kick-ahead)
- Engine-on rudder angle to balance the current yaw moment
- Mooring resilience traffic-light (intact / damaged / foundation / fatigue)
