

API 5C3 · API 5CT · NACE MR0175

Well construction — casing & tubulars

Production-casing design checks on the API 5C3 / API 5CT product catalog — burst (tubing leak + frac screen-out), full-evacuation collapse, buoyed-weight tension and Von Mises triaxial against published operator design-factor minimums, plus the maximum allowable frac surface pressure, the NACE MR0175 sour-service screen and the connection-class tension efficiencies.

WHAT YOU GET

- Burst / collapse / tension / triaxial design factors with governing depth per product
- API 5C3 ratings (4-regime collapse) computed from the API 5CT catalog, API-rounded
- Max allowable frac surface pressure at the burst design factor
- NACE MR0175 sour screen (0.05 psia H₂S; 65 / 265 psia) with grade temperature windows
