

Short-horizon motion forecast

Live vessel & structure motions from an onboard MMS / MRU, plus a phase-resolved wave forecast transferred through the asset RAO to predict the next few motions — a rolling go / no-go with lead time for crane lifts, walk-to-work gangways and helideck landings, bounded honestly by the predictable zone.

WHAT YOU GET

- Two data modes: measured (MMS/MRU) 'now' + predicted forecast
- 6-DOF vessel & structure-interface motion via AQWA / OrcaFlex RAOs
- Rolling GO / CAUTION / NO-GO with lead-time to first breach

Ask Deckhand: “Run the digitalmodel short-horizon motion forecast and send me the report.” — send to @the_deckhand_bot to run it live.
