

DNV-ST-F101 · API RP 1111 · ASME B31.4/8 · PD 8010-2 · ISO 13623

Wall-thickness multi-code explorer

One 12.75-inch X65 deepwater line sized under all nine registered design codes at once — a wall-thickness slider drives each code's governing utilization against the 1.0 limit, with the minimum wall to pass per code. Every point is a live WallThicknessAnalyzer evaluation (369 in total), not a mock.

design codes

369

engine evaluations

~19.5 mm

min wall, pipeline codes

WHAT YOU GET

- Burst / pressure-containment, collapse (solved from the cubic), propagation-buckling and combined-loading utilizations per code
- Edition-aware factors (DNV-OS-F101 2007 vs DNV-ST-F101 2021; API RP 1111 3rd vs 4th edition)
- Propagation buckling governs the pipeline codes (~19.5 mm needed) while DNV-ST-F201 riser LRFD passes at 8 mm

Ask Deckhand: “Run the digitalmodel wall-thickness multi-code explorer and send me the report.” — send to @the_deckhand_bot to run it live.
